SMP Evo

Flexible, cement-based tile adhesive specifically designed for premium stone, marble and porcelain tiles

WHERE TO USE

Surfaces
Most common substrates; building boards including plasterboard, compressed and fibre cement sheet, rendered brickwork and blockwork, existing ceramic tiles, new concrete cured in 1 week and new screed cured in 24 hours, compatible waterproofing membranes, timber floors (fibre cement sheet underlay required). Suitable for use over under-tile heating and over Davco acoustic underlay.

Tiles
Ideal for premium stone, light coloured natural stone, marble and granite with the exception of moisture sensitive stone - use Davco 2-Part Rapid. As well as all common tiles, vitrified porcelain, large format and rectified (square) edge tiles.

Areas
Commercial and domestic walls and floors including high foot traffic locations, bathrooms, showers, kitchens, laundries, living rooms, balconies, patios, swimming pools and spas.

FEATURES & BENEFITS

• Dust Less Technology
• Commercial grade
• Suitable for swimming pools
• For use over under-tile heating
• Very high bond strength
• Non-vertical slump for easy wall tiling
• Non-shrink for a level, even finish
• White formulation ideal for light coloured stone

PACKAGING
Available in a 5kg or 20kg bag

PRODUCT INFORMATION

AS ISO 13007 Classification
C2S1TE (C2S2TE when mixed with Davco Davelastic solution)

VOC Content
Low VOC - 7g/L (SCAQMD method 304-91)

Coverage
20kg bag of Davco SMP Evo covers approximately 6m² - 7m² (based on a 10mm notch trowel)

Set Time
24 hours before grouting
DIRECTIONS FOR USE

• Test product in an inconspicuous area first
• It is essential to plan the area to be tiled, with inclusion of movement joints, in accordance with the Australian Standard AS3958.1 “Guide to the Installation of Ceramic Tiles.” Failure to do so may result in drummy or lifting tiles. Make sure normal building or surface movement is accommodated by installing movement joints as follows:
  – Over movement joints in the substrate
  – At a junction between different substrate materials
  – At fixtures interrupting the tile surface e.g. columns
  – At internal vertical corners
  – Around the perimeter of the tiling system
  – At a maximum of 4.5m centres, in a grid pattern
  – Movement joints should be kept free from dirt and adhesive droppings
  – All movement joints can be filled with Davco Elite Silicone or polyurethane type fillers
• Select a trowel with an appropriate square-notch size for the size and type of tile, as per the following:

<table>
<thead>
<tr>
<th>TILE SIZE</th>
<th>TROWEL NOTCH SIZE</th>
<th>BACK BUTTERING REQUIRED</th>
</tr>
</thead>
<tbody>
<tr>

SURFACE PREPARATION

• All surfaces must be installed according to manufacturer’s instructions and relevant Australian Standard(s) and be structurally sound, dry, clean and free from movement, oil, grease, wax, sealers, curing compounds, release agents and any other loose or contaminating material. Thoroughly clean old surfaces, or new surfaces that have been treated, prior to tiling
• Deeply contaminated surfaces must be scabbled / abraded to a clean, sound surface. Expose at least 80% of the original substrate of painted surfaces
• Surfaces should be prepared and primed as per the following:

<table>
<thead>
<tr>
<th>SUBSTRATE</th>
<th>SPECIFIC REQUIREMENTS</th>
<th>PRIMING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Concrete - wood float finish (rough)</td>
<td>Cured minimum 1 week</td>

MIX PREPARATION

Mix Process

<table>
<thead>
<tr>
<th>SITUATION / REQUIREMENT</th>
<th>MIX REQUIREMENTS PER 20KG</th>
</tr>
</thead>
<tbody>
<tr>
<td>General applications</td>
<td>5-6L of clean, potable water</td>
</tr>
</tbody>
</table>

1. Measure the right amount of clean, potable water (or diluted Davelastic solution) into a clean bucket.
2. Slowly add the powder into the water while mixing with a mixing paddle attached to a drill. Do not mix by hand.
3. Continue to mix for several minutes until a creamy consistency is achieved, free of lumps of powder.
4. Allow mixture to stand for 5 minutes, remix then use the adhesive.
 APPLICATION

Laying the Tiles

1. Deposit a quantity of adhesive onto the prepared substrate. Do not apply more adhesive than can be tiled within the open time of the product, usually from a single tile up to around 1m² at a time.

2. Hold the notched trowel at an angle of 60º or greater to the substrate.

3. Spread the adhesive over the area where tile is to be applied, forming straight rows of adhesive “beads”.

4. Where “back buttering” is required, use the straight side of the trowel to apply a thin covering of adhesive to the back of the tile.

5. Position the tile on the beaded adhesive and press firmly.

6. Move the tile forward and then back at 90º across the direction of the beads to ensure all beads are flattened leaving no voids under the tile. Occasionally lift a tile after placing it to check that the beads are fully compressed and that sufficient coverage has been achieved (90-100%). Replace the tile.

7. After laying a section at a time, remove any excess adhesive from the surface of the tiles and within the grout joint while the adhesive is still wet.

Clean-up & Return to Service

- Clean tools and equipment with water before the adhesive dries
- Allow product to set before grouting
- Allow product to set firmly before return to service

Note: Setting times of adhesive is affected by site conditions, climate and could be faster or slower than specified

 PRECAUTIONS

Safety

- SDS is available from www.parexdavco.com.au
- It is recommended that applicators wear PVC or similar gloves and safety goggles while handling this product.
- If eye contact occurs, rinse with cool water
- If ingested get immediate medical assistance
- Keep out of reach of children

General

- Do not apply in temperatures above 35ºC or below 5ºC
- In cool and / or humid conditions, allow longer setting times
- Do not allow the adhesive to skin prior to laying the tiles. If the adhesive skins remove and dispose of it, then re-apply fresh adhesive

Specific

- Not suitable for moisture sensitive stone - use Davco 2-Part Rapid
- For tiling over existing ceramic tiles in wet areas, such as a shower recess, mix Davco SMP Evo with a diluted Davco Davelastic solution
- Do not use for tiling over existing tiles in submerged areas, such as swimming pools and spas
- For other uses not mentioned in these instructions, please visit www.parexdavco.com.au

Classification according to solution when mixed with Davco Davelastic: C2S2TE

Appearance: White powder

Coverage: 20kg based on 10mm notch trowel: 6m² - 7m²

Adjustment time: 20 minutes

Pot life: 1 hour 30 minutes

Set time before grouting: 24 hours

Set time before return to dry area service: 24 hours

Set time before return to wet area service: 2 days

Set time before return to submerged area service: 21 days

Shelf life when stored unopened in elevated, cool, dry location: 12 months

All measurements are taken at 22ºC and 50% relative humidity. Specifications vary according to site conditions and should be taken as a guide only.
